

To CT Transportation Committee:

Highway Tolls are retrogressive.

They were eliminated to cure traffic congestion and to improve safety. Reintroducing tolls are counter to both health and safety.

Additionally, what have impact studies shown?

Environmental depredation:

thousands of cars, trucks, buses idling in toll lines contributing greenhouse gases to the atmosphere and

quickenning global warming and

pollution of the communities surrounding the toll locations and beyond.

Do not neglect the costs to commuters, families, and businesses, as well as added inconvenience of delays in already crowded corridors.

NO TO TOLLS!
